
(a) the ceiling holds across the sweep
bold: median over sweep
Moran
Fermi
cooperation p_C
return on investment r
(b) the ceiling is hard, $r > N$
median, $r > N$
Moran (selection ε)
Fermi (choice β)
cooperation p_C
intensity (normalised)
(c) Fermi is invariant to r
median over M, μ
$\beta = 0.44$
$\beta = 1.11$
$\beta = 2.00$
cooperation p_C
return on investment r
(d) The Ceiling Remains Across N
max p_C in sweep, $\varepsilon, \beta > 0$
Fermi
Moran
N
p_C
